Technically evaluating functional flow of stripe

In order to integrate stripe in our payment integration system we need to call stripe API which is checkout session API.

Stripe create session API documentation is guiding us on how to call create session API and what response they will give back to us.

https://docs.stripe.com/

https://docs.stripe.com/api/checkout/sessions/create

Steps to approach any Integration:
4

1. Read the documentation to understand the functional flow.
2. Test the APIs to check if its working as expected
3. Decide how you want to implement in your project
4. Designing and coding spring boot application

Stripe has already created a checkout session API and is currently running in their system.
We want to call it from a local machine and test it.

Testing steps:

1. Call create session API
    - We are using postman setup for API testing
    - We need a merchant account in stripe, It will activate test mode
    - https//dashboard.stripe.com

2. We will check if response is having url
3. We will redirect the url in browser
4. We will make a test payment
5. Check if redirected back to merchant page
6. Check if we are receiving notification/webhook

Features of Stripe API:

1. Stripe API organised around REST Standards.
2. Accepts form encoded request bodies
3. Returns JSON encoded responses
4. Uses standard HTTP response codes, authentication, and verbs/HTTP methods which doesn't affect live data
5. Stripe API uses API keys to authenticate requests
6. You can view and manage your API keys in the stripe dashboard
7. Authentication to the API is performed via HTTP Basic auth
8. API key we can get from stripe dashboard after logged in to it
9. Provide your API keys as the basic auth username value you do not need to provide password

Practical step implemented to test create session API

1. Import curl from the stripe documentation for create-session-api in postman
2. Use API secret key in Authorization(Basic auth)
3. We corrected the request fields by checking the documentation
4. Customer should make a test payment using testing cards https://stripe.com/testing

5. Payment completed with green tick button and redirected to success url
